CASE STUDY 009
[R]
Wikipedia Page Views

Here are some clues in case you are stuck with the case study:

1. For question 1 you will need to use functions dir, lapply and do.call. First put all the files you want to load into one folder with nothing else in it

2. If you need more help search using the following phrase "r load all csv files from folder"

3. Use function unique to remove duplicates

4. Use is.na to find rows with NA in them

5. The language of each page is the letters before the underscore in the source column eg fr_mw is a French language page
